                                                                                                                                                                                                                                                                                                                                   -1- FUNCTION: BIDIRECTIONALLY DEGRADES SINGLE-STRANDED DNA INTO LARGI ACID-INSOLUBLE OLIGONUCLEOTIDES, WHICH ARE THEN DEGRADED FURTHER INTO SMALL ACID-SOLUBLE OLIGONUCLEOTIDES (BY SIMILARTY).

-1- CATALYTIC ACTIVITY: Exonucleolytic cleavage in either 5'- to 3'- or 3'- to 5'-direction to yield 5'-phosphomononucleotides.
-1- SUBUNIT: HETEROOLIGOMER COMPOSED OF LARGE AND SMALL SUBUNITS (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                           Pfam; PP02601; Exonuc_VII_L; 1.

## SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             milted (FEB-2000) to the EMBL/GenBank/DDBJ databases.
FUNCTION: CAN METABOLIZE THE AFLATOXIN B1 (AFB1) PROTEIN-BINDING
DIHYDRODIOL BY FORMING NONBIHDING AFB1 DIALCOHOL. COULD BE
INVOLVED IN PROTECTION OF LIVER AGAINST THE TOXIC AND CARCINOGENIC
EFFECTS OF AFLATOXIN B1.
SUBCELLULAR LOCATION: CYtoplasmic.
SIMILARITY: BELONGS TO THE ALDO/KETO REDUCTASE 2 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PYGRE

POINTION: RECEPTOR FOR ATRIAL NATRIURETIC PEPTIDE. HAS GUANYLATE CYCLASE ACTIVITY ON BINDING OF ANF.

CYCLASE ACTIVITY ON BINDING OF ANF.

SUBCELLIAHAR LOCATION: Type I membrane protesin.

MISCELLANEOUS: THERE SEEM TO BE AT LEAST THREE ANP RECEPTORS: TWO HITH GUANYLATE CYCLASE ACTIVITY (ANP-A AND ANP-B) AND ONE (ANP-C) WHICH IS PROBABLY RESPONSIBLE FOR THE CLEARANCE OF ANP FROM THE CIRCULATION WITHOUT A ROLE IN SIGNAL TRANSDUCTION.

SIMILARITY: BELONGS TO ADENYLYL CYCLASE CLASS-4/GUANYLYL CYCLASE

ANP RECEPTORS: TWO
-B) AND ONE (ANP-C)
E OF ANP FROM THE

SIMILARITY: CONTAINS I PROTEIN KINASE-LIKE DOMAIN.

1- FUNCTION: RECEPTOR FOR ATRIAL NATRIURETIC PEPTIDE. NAS GDANYLATE

CYCLASE ACTIVITY ON ENDOING OF ANF.

-1- CATALYTIC ACTIVITY: GTP - 3',5'-cyclic GMP + diphosphate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pardhasaradhi K., Kutty R.K., Gentieman S.,

ID DOMAIN: THE MAM DOMAINS PROBABLY MEDIATE SPERM ADHESIDN TO THE ZDNA PELLUCIDA.

ID DOMAIN: DURING SPERN MIGRATION THRDUGH THE REPRODUCTIVE TRACTS, THE MUCCIN-LIKE DDMAIN MIGHT INHIBIT INAPPRDPRIATE TRAPPING DF SPERMATOZDA DR PROMDTING ADHESIDN TO THE OVIDUCTAL ISTEMUS.

ID DOMAIN: THE VWFD DOMAINS 2 AND 3 MAY MEDIATE COVALENT DLIGOMERIZATIOH (BY SIMILARITY TO HUMAN INTESTINAL MUCI).

IPTM: THE MAM DOMAINS AND THE MUCIN-LIKE DOMAINS ARE MISSING FROM THE ZDHADHESIN THAT BINDS TO THE EGG EXTRACELLULAR MATRIX. PROCESSING MIGHT OCCUR DURING SPERM MATBRATIDN AND/OR CAPACITATION.

IS SIMILARITY: CONTAINS 2 MAM DOMAINS.

IS SIMILARITY: CONTAINS 1 EGF-LIKE DOMAINS.
